HOLIDAY KITCHENS

Dream it. Live it.

At Holiday Kitchens, we value old-world craftsmanship combined with innovation, state-of-the-art equipment, and process controls. Our focus is to deliver high-quality cabinetry that creates a space in tune with who you are and how you live.

For over 75 years, Holiday Kitchens has remained one of the largest fully custom, integrated cabinet manufacturers in the U.S. We will continue to source American-made materials to produce Holiday Kitchens cabinets right here in Rice Lake, WI.

Our mission is to provide on-time products of high quality, style, and function through the professionalism, expertise, and efforts of each and every employee.

If you can Dream It, Holiday can Build It.

Environmental Stewardship

LIVE GREEN

We are all learning how to be better to our Earth.

After 75 years, Mastercraft Industries / Holiday Kitchens has evolved with the cabinet industry's green efforts and adopted new practices along the way. It is not just a best practice for us, but a way of doing business from start to finish.

Today, Holiday Kitchens is a proud member of the Kitchen Cabinet Manufacturers Association's (KCMA) Environmental Stewardship Program (ESP). The KCMA ESP program is a holistic approach to ensuring that each participant is held to high standards for their products, forest sustainability, and manufacturing processes.

At Holiday Kitchens, we set the highest level of production standards for ourselves and expect the same from our suppliers. This ensures that when you order Holiday Kitchens, you can be confident that our Environmental Stewardship protects the integrity of our practices.

We are excited to offer a variety of green options as you customize your new cabinetry. In the following pages, you will find beautiful options that are constructed and finished with products that either meet or exceed environmental standards and are ready to stand the test of time.

Standard Wood Species

FOR MORE INFORMATION GO TO HOLIDAYKITCHENS.COM

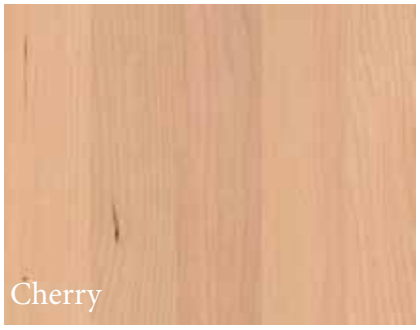

Alder & Character Alder

Alder is a relatively soft and light hardwood. It ranges from light golden brown to a reddish brown. Alder has relatively straight grain and even texture. Because alder is a fast-growing tree, it often has small pin-knots, some mineral streaks, and pitch pockets. It is similar in appearance to cherry.

Alder

Cherry & Character Cherry

Cherry is a durable hardwood often used in fine furniture. It ranges in color from a light pinkish wheat to a rich reddish brown. The grain pattern of cherry is quite unique, with some pieces showing relatively straight grain and others showing bold, wavy arcs and bends. Cherry often has small pin-knots, some mineral streaks, and pitch pockets. Small areas of lighter colored sapwood are to be expected.

Cherry

Hickory & Character Hickory

Hickory is a strong, durable hardwood. It ranges widely in color from almost white to dark, reddish brown. Hickory has distinctive grain patterns and texture. Hickory often has small sound knots, mineral streaks, grain cracks, smooth flake, and a distinctive variation of other natural characteristics.

Hickory

Maple & Character Maple

Maple is a strong, dense hardwood. Holiday Kitchens maintains a very tight range of light, almost white, color. Maple can have distinctive grain and has a tight, smooth texture. Maple often has pin-knots and a few small mineral streaks.

Maple

Oak (Red) & Character Oak (Red)

Red oak is a dense, durable hardwood. It ranges in color from a light brown to a pinkish brown. Oak has relatively distinctive arching grain and porous texture. Oak often has small pin-knots and some mineral streaks.

**Character - has a rustic appearance. This includes sound knots of varying sizes, and a wider variation of color, sapwood and other natural characteristics.*

Oak

Standard Wood Species

Quarter Sawn (Red Oak)

Quarter Sawn oak has similar characteristics to oak, but is cut from the tree in a different manner that yields a tight, straight grain pattern. It tends to range slightly redder in color than Holiday Kitchens' standard red oak. Quarter Sawn Oak shows very few small knots and some mineral streaks. In addition to its tight grain, quarter sawn oak yields "flakes", which are distinctive, shiny portions of the grain.

Quarter Sawn Red Oak

Rift-Cut White Oak

Rift-Cut White Oak is cut from the tree in a manner that yields a tight, straight grain pattern. The wood color ranges from a greenish-gray to light brown, occasionally with a slight pink hue. Rift-Cut White Oak shows very few small knots and some mineral streaks.

Rift-Cut White Oak

Paint Grade

Paint Grade consists of maple stiles and rails and an MDF center panel on doors. It is a strong, dense hardwood with tight grain and smooth texture, making it ideally suited for painting. The color range varies more with Paint Grade, as this is not visible through the paints.

Paint Grade

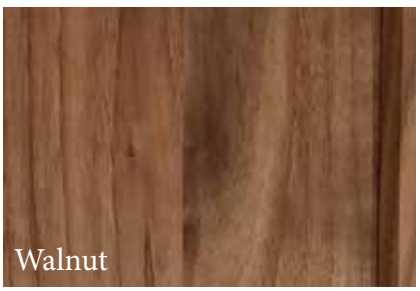

Paint Grade MDF

Paint Grade MDF offers an alternative to Paint Grade for paints. Paint Grade MDF consists of MDF material only, with a smooth texture making it ideally suited to painting.

Paint Grade MDF

Walnut

Walnut is a strong and versatile wood and is a mix of heartwood and sapwood. Walnut can range in color from a warm chocolate brown to nearly white with a variation of grain patterns and a medium texture.

Walnut

Due to the distinct properties of each wood species, some finishing options are limited to certain species; check the Finish Availability for more information.

Wood Stains

Actual colors may vary from this printed brochure. Request a sample of wood species and color for a more accurate representation.

Standard Paints

Antique White	*Breeze*	*Ebony*	*Galveston*	*Indigo*	*Indigo Batik*	*Laguna*

Nimbus	*Nordic*	*Sage*	*Snowdrift*	*Storm*	*Vineyard*	*Wave*	*Winter*

Actual colors may vary from this printed brochure. Request a sample color for a more accurate representation.

Custom Paints

Holiday Kitchens provides many standard paint options, and we know that sometimes you just need a very specific color. For those moments, we offer the Benjamin Moore/Sherwin-Williams/Farrow & Ball Custom Paint Matching Program. This program allows you to choose the cabinet color of your dreams.

Mission – Paint Grade Maple in Custom Benjamin Moore Paint

Photography | Ryan Halsey

Sheens

A sheen can change the look of any color. All standard paints and stains are available in standard, matte, or flat sheens.

Glaze Options

A glaze is an accent color applied to enhance the grain, style and detail of a cabinet door.

Standard Glazes - Available on stain or paint

Alpine *Mocha* *Onyx* *Toffee*

Wash Glazes - Available on stain or paint

Graphite *Latte* *Mink* *Pewter* *VanDyke*

Silk Brush Glazes - Available on Paint Grade and Paint Grade MDF

Frost *Midnight* *Sandstone* *Shale* *Slate*

Brush Glazes - Available on select species with stain or paint

Harbor *Suede* *Tudor*

Specialty Finish

Cerused

The cerused technique is a hand-brushed finishing treatment that deepens the wood's natural grain, allowing it to accept a contrasting pigment resulting in a beautifully unique finish. All of our glaze colors are available to use for cerusing. Available in Oak, Character Oak, Quarter Sawn Oak, Rift-Cut White Oak, Hickory, and Character Hickory.

PICTURED: *Mission Oak in Knight with Alpine Glaze and Cerusing*

Cerused

Logoro

Logoro

Logoro simulates an aged, timeworn look using a mechanical aging process. The base color is available in all of our standard paints and full custom paints. Special BM/SW match pricing is not available. Logoro is available on the following wood species: Alder, Cherry, Hickory, Maple, Oak, Quarter Sawn Oak, Rift-Cut White Oak, White Oak and their Character options. Some additional treatments are allowed at the regular upcharge including: wormholes, splits, distressing, joint-cuts, knife-outs with rasping, and eased edges and corners.

PICTURED: *Charleston 3" stiles & rails, Hickory in Nordic with Logoro*

Logoro Molte

Logoro Molte features the same beautiful characteristics as Logoro, but has peeled paint revealing the wood underneath, adding to the aged look.

PICTURED: *Lancaster Square Oak in Wave with Logoro Molte*

Logoro Molte

Weathered

Weathered

Weathered Contemporary, Weathered Mission, Weathered Seattle, and Weathered Seattle Duet; and shiplap options are made with wood that has been mechanically brushed to create deep, worn lines in the surface of each component. The door is assembled after mechanical brushing so that the lines are in the direction of the grain for each component of the door. Available painted or stained and on the following species: Alder, Cherry, Maple, Paint Grade, Paint Grade MDF, and their Character options.

PICTURED: *Weathered Seattle 3" stiles & rails, Maple in Fog with Onyx Glaze*

Vintage Artistry

Vintage Artistry finish treatments are designed to create an aged, worn look similar to what can be found on antique furnishings. We recommend approving a door sample prior to ordering any of the Vintage Artistry options so that you can clearly visualize the look. Vintage Artistry is available with any of our topcoat sheens, though we recommend either flat or matte to achieve the aged furniture look.

Carriage House

Available on Alder, Cherry, Oak, and their Character options, as well as Quarter Sawn White Oak and Rift-Cut White Oak. This is Holiday Kitchens' specially designed heavy-worn look. A coat of paint is lightly applied over a pre-stain finish to allow a dark brown undertone of natural wood grain to gently telegraph through the paint. The heavy-worn look simulates aged wood showing through a finish that has been naturally worn away by heavy use. The component is then glazed, completing the aged look. All of this is fully top-coated to protect the component. Additionally, wormholes, splits, distressing, and flyspeck Vintage Artistry options can be added at no charge but must be specified. Our standard options are pre-stain, one light coat of paint, heavy-worn look (other Vintage Artistry options must be specified), choice of standard glaze or wash, and choice of topcoat. Other color options are available as custom color matches. When electing Carriage House, you must add for paint and glaze premiums. Not recommended on mitered doors.

Carriage House

Distressing

Using special tooling, random dents and dings are applied to the surface of solid wood to give the appearance of wear and age. Finish is applied after distressing to preserve the wood. Distressing can be done on any visible surface, including finished interiors.

Distressing

Eased Edges & Corners

Prior to finishing, the corners and some edges of the component are sanded down to give the soft, rounded look common in antique furniture. Unlike Worn Look, the finish is not worn after application. This can be done on the outside corners and edges of doors, drawer fronts, decorator panels, decorative moldings, and valances. Not recommended on mitered doors.

Eased Edges & Corners

Flyspeck

Small specks of dark finish are applied randomly to the surface of the wood to give the appearance of aging. This is applied to the entire exterior of a component, as well as to any finished interiors. Our standard color is black, but custom color matches are available if a different shade is desired.

Flyspeck

Joint-Cuts

Joints of assembled components are accented by applying distinctive hand cuts along the joint line. Multiple angled, v-shaped cuts are made at each joint. This look is not meant to provide a machined v-groove appearance, but rather the look of hand-crafted joint. Joint cuts will be irregular in width and appearance. This look is available on any door, drawer front, decorator panel, appliance panel, or wainscot with cope and stick construction. Not available on molding-applied or mitered door styles.

Joint-Cuts

Vintage Artistry

Knife-Outs

Wood is carved along solid edges in a method similar to whittling. Gouged out edges are smoothed by gentle sanding to give the appearance of old, worn damage found in antique furniture. The corners and some other edges will be worn down, as with Eased Edge and Corner treatment. This treatment can be done on the outside and the inside corners and edges of doors, drawer fronts, decorator panels, decorative moldings, and valances.

Knife-Outs

Knife-Outs with Rasping

Wood is carved away along solid edges in a method similar to whittling. Gauged out edges are smoothed by gentle sanding to give the appearance of old, warn damage found in antique furniture. These gouges are then textured using a cross-hatch pattern applied with a knurled wood rasp. The corners and some other edges will be worn down, as with Eased Edge and Corner treatment. This treatment can be done on the outside and inside corners and edges of doors, drawer fronts, decorator panels, decorative moldings, and valances.

Knife-Outs with Rasping

Splits

Tooled, thin lines running with the grain are carefully applied to solid wood doors to give the appearance of being cracked without sacrificing the strength of the component. Random spits, resulting from drying and movement of the wood or hard use, are common in old wood, and this look captures that feel. Spits will range in size from 1 to 3 inches. They will be found at the beginning of the edge and extend inward along the grain applied to solid doors and drawers only. Not available on mitered door styles.

Splits

Wormholes

Small round holes are punched randomly into the surface of solid wood components to simulate natural wormholes in wood. These holes are applied singly and in random clusters. Wormholes can be applied to any solid wood material such as doors, drawer fronts, trim moldings, face frames, and decorator end panels. Wormholes cannot be applied to veneered sheet goods, such as plywood.

Wormholes

Worn Look

Prior to finishing, the corners of the component are worn down to give the soft, rounded look common in antique furniture. After finish color is applied, these corners will be lightly hand-sanded and rubbed again to break through the finish, simulating natural wear over time. Our strong, protective topcoat is applied after this wearing to preserve the component. This can be done on the outside corners and edges of doors, drawer fronts, decorator panels, decorative moldings, valances, but not on cabinet frames.
Not recommended on mitered door styles.

Framed Construction

Every part of Holiday Kitchens Framed cabinets are interlocked with dados, including backs, deck tops, siderails, dividers and toe kick support.

1/2" Hybrid Box

A. Housing:
Wood grain vinyl interior - 1/2" plywood sides, 1/2" particle board top and bottom, 1/2" plywood back

B. Toe Board:
1/4" plywood 3-3/8" high pieces loose for field installation onto toe kick support board, dimensions shown are after jobsite installation

C. Shelves:
3/4" particle board with vinyl applied both sides and PVC banding. Shelves are adjustable on spoon clips

D. Face Frame:
3/4" x 1-1/2" solid hardwood

1/2" Plywood Box

A. Housing:
Wood grain vinyl interior - 1/2" plywood sides, bottom, and back

B. Toe Board:
1/4" plywood 3-3/8" high pieces loose for field installation onto toe kick support board, dimensions shown are after jobsite installation

C. Shelves:
3/4" plywood with vinyl applied both sides and PVC banding. Shelves are adjustable on spoon clips

D. Face Frame:
3/4" x 1-1/2" solid hardwood

5/8" Plywood Box

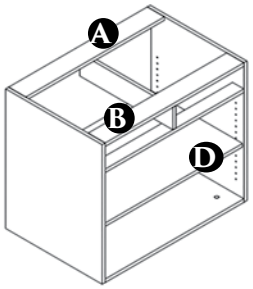

A. Housing:
Natural Maple pre-finished veneer interior - 5/8" plywood bottom, unfinished sides, and plywood back

B. Toe Board:
1/4"plywood 3-3/8" high pieces sent loose for field installation onto toe kick support board, dimensions shown are after jobsite installation

C. Shelves:
3/4" maple plywood with maple edge banding, adjustable on spoon clips

D. Face Frame:
3/4" x 1-1/2" solid hardwood

Frameless Construction

Frameless cabinets, also referred to as Full-access or European-style cabinets, provide a contemporary style, maximized storage space with wider drawers and rollout shelves (versus framed units) and provides continuous symmetry of door and drawer lines.

3/4" Melamine

A. Hanging strips 1/2" x 2-13/16"

B. Housing:
Available in White Melamine, Natural Maple Melamine, NAF Melamine and NAF Natural Maple Veneer

C. Toe Board:
3/4" industrial board 4-3/8" high pieces loose for field installation.

D. Shelves:
Match the interior. Shelves are adjustable on spoon clips

3/4" Plywood

A. Hanging strips 1/2" x 2-13/16"

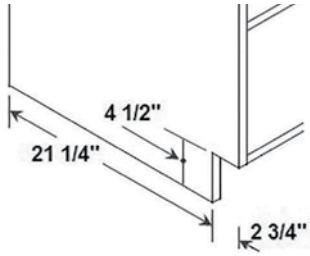

B. Housing:
Available in Plywood and NAF Plywood

C. Toe Board:
3/4" Plywood 4-3/8" high pieces loose for field installation.

D. Shelves:
Match the interior. Shelves are adjustable on spoon clips

Toe Kick Options

Notched for toe, sides extended down.

Adjustable Leg Levelers:
Adjust leg height from 3-3/4" to 5-3/4"
